

## Evidences

### Study #4085

**Contributing Projects:**

- P1680 - Product Line 5.3.1: Menu of approaches for nutrition-sensitive livestock-related interventions to improve availability, affordability, access and utilization of animal-source foods

**Part I: Public communications**

**Type:** Correlates of adoption/impact study

**Status:** Completed

**Year:** 2020

**Title:** Impact of Girinka program on child nutritional status and household food security

**Commissioning Study:** ILRI

**Part II: CGIAR system level reporting**
**Links to the Strategic Results Framework:**

Sub-IDOs:

- Increased access to diverse nutrient-rich foods

Is this OICR linked to some SRF 2022/2030 target?: Too early to say

Description of activity / study: The Government of Rwanda and its partners (including ILRI) have since 2006 been implementing a livestock asset transfer program, "Girinka", to improve incomes, nutrition, soil fertility and social integration. Evidence of the impact of the program on nutrition outcomes was lacking, so a study was undertaken to compare nutrition outcomes in Girinka households with those who are eligible for Girinka but have not yet received a cow. The results have not yet been published in a peer-reviewed journal but a brief is available.

**Geographic scope:**

- National

Country(ies):

- Rwanda

Comments: <Not Defined>
